

PREMASOL METMASTER METAL POLISH

Premasol Metmaster Metal Polish combines the unique attributes of precisely controlled high-purity alumina and our colloidal silica in a proprietary formula to produce the ultimate chemical-mechanical final polish.

Test results show that this dispersion, with a pH between 8.5 and 9, provides a superior finish on both ferrous and non-ferrous metal composites.

Recent laboratory failure analysis testing on carbon steel along with several other steels revealed superior results over current competitive products.

Testing also revealed that Premasol Metmaster has superior wetting properties. Where competitive products tend to fly off the lap, Premasol Metmaster remained in process allowing for a reduction in non-productive consumable loss.

We recommend that Premasol Metmaster Metal Polish be used at full strength with most materials and with a minimum of water on ferrous materials.

Premasol Metmaster Metal Polish maintains the same gold standard of quality that customers have come to expect from Ocean State Abrasives.

Premasol Metmaster Metal Polish combines two of Ocean State Abrasives' premier products in a proprietary formula to achieve superior finishes.

AVAILABLE IN

1 GALLON JUG

4 GALLON CASE

5 GALLON PAIL

55 GALLON DRUM

POLISHING MEDIUMS

- PREMAPADS
- GUGOLZ PITCH
- FELT WHEELS
- POLISHING CLOTHS
- METAL LAPS

- MADE FROM A PROPRIETARY MIX OF ALUMINA POWDER & COLLOIDAL SILICA
- ADHERES TO THE LAP WHEN COMPETING PRODUCTS DO NOT
- PRODUCES A SUPERIOR FINISH ON FERROUS & NON-FERROUS MATERIALS
- REDUCES WASTE & DOWN TIME

pH 8.5 - 9
